

Deployment / Roll-Out

The Deployment / Roll-Out Scope

Our Deployment Team enables the individual projects to use the provided capabilities. By providing the technical set-up, trainings and hands-on support.

Technical enablement through data migration, project set-up in Polarion

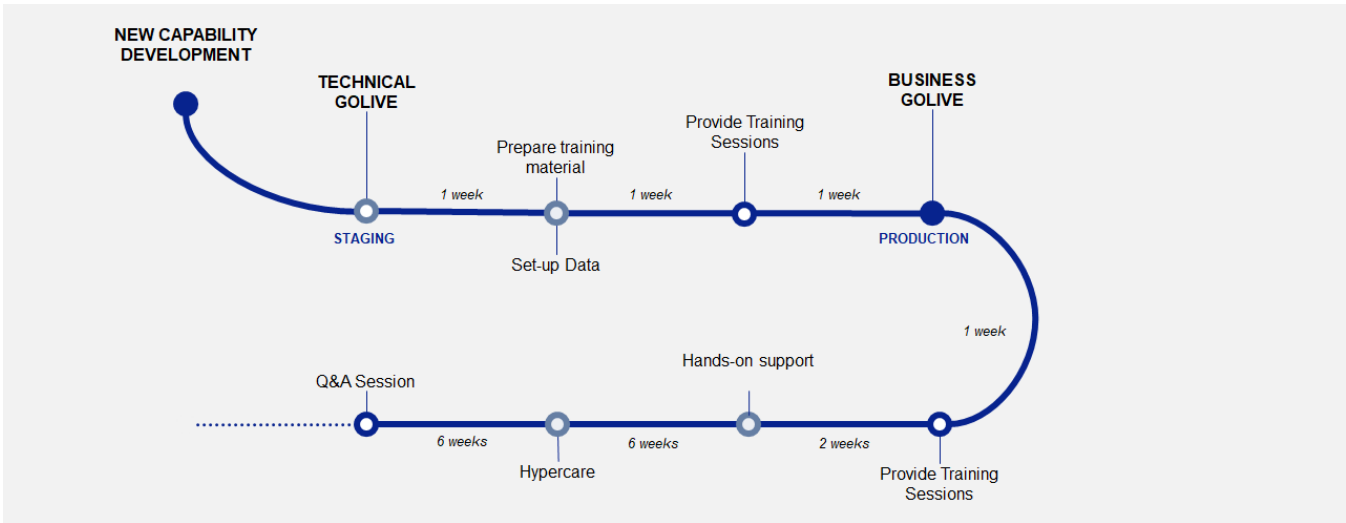

Business enablement through Hands-on support, hypercare, training

Continuous improvement through frequent Q&A session

Our approach to deploy ALM Capabilities

Our Deployment Team works in close alignment with the projects to identify the best time to deploy new capabilities. As soon as the scope and timeline are defined, the Deployment Team and the project follow the path shown below. Deployments can be either triggered by a newly developed or updated capability or a new project within Polarion. The timeline of the project does not have to match the Polarion release timeline.

Exemplary process of a deployment for a new capability
