

DevOps Bug creation under feature

Steps

Step	Action	Screenshot
1	Click on the link to create Backlog. Link: GPDm Polarion Project Core Team Epics Backlog - Boards (azure.com)	
2	Expand the Epic "Enhancement from different sources outside Devops". To create a BUG, open the feature "Quickservice Topic which still need to be structured".	
3	FEATURE 91757 is a parent. Under "Related Work", click on "+" symbol then click on "New item".	
4	Select "Link type" as Child and select the Work item type and provide the title name along with Quickservice ticket number. click on "OK"	
5	Bug has been created.	

6	Click on the templates, select the relevant template (Ex: BUG). Some set of questions will be generated in the item.	
7	The first set of information will be filled by AMS (Ex: Description, quick service ticket and other relevant information)	
8	Business Feasibility and Technical Feasibility: filled by either AMS or Developer working on the topic.	
9	Save the Item	
10	Once bug is created, click on the 1-click child-links and it will automatically create a list of tasks linked to this BUG.
