

How to handle “Read only project”

Step	Action	Screenshot
1	Pre-Requisites: - Once a project decided to be made read-only, AMS Team will receive a Digital User Account Request in QService to set up the project to the List of Read Only. - Whenever the projects made read-only, all the roles of the Existing Users will be removed except PROJECT_USER and CORE_USER roles, this is defined in the multiple UACF attached to the Qservice ticket.	
2	Steps to be followed by AO Support after getting the details: Once a project decided to be made ready- only, the projects should not be available in the project Dropdown of the UACF requests. Link: Digital UACF	 The screenshot shows a web browser window with the URL https://qservice.intra.fresenius.com/serviceesk/customer/portal/17/create/283. The page displays a form for creating a user account request. Under the 'User Account Request Type' section, the following options are listed: None, Create New User Account, Change User Permissions (selected), Change Of FID, Remove User Access To Project, and Remove User Access To System. Below this, there is a section for 'Affected GPDN Polarion Project(s)' with a dropdown menu. The dropdown is open, showing a list of projects: 5008_4_63_0 (highlighted), 5008_Trunk, 50085_6008_Family, 50085_Mantis_Backlog, 50085_Trunk, and 6008_7_46_0.
3	AMS Engineer will create a Quick Service ticket to remove the read only Project from the list of Existing Projects (Context's drop down). Link: General Support	
4	After the request is completed, the read only project will be removed from the Dropdown.	
5	End users will not be able to select it anymore. Additionally, the AO Support marks the Project as "Global Read only" in the Master Project List. Link: Master Project List	
6	Note 1: As the read only project will no longer be available in the dropdown, when an End User requests reading access to any Read Only projects, they can create a UACF request and in the project section, user will select "PROJECT NOT IN THIS LIST" project in the Dropdown and in the description they can provide the information of the read only project in which they need the access but only PROJECT_USER and CORE_USER roles. Note 2: If a user selects "PROJECT NOT IN THIS LIST" and roles that are not only PROJECT_USER and CORE_USER roles, BUT the AMS team shall also check the Master Project List to ensure the project is not a read-only project before providing the requested roles. If the project is read-only the user shall be made aware and no writing access shall be provided. AMS Engineer will provide them with only PROJECT_USER and CORE_USER roles after the proper Approval process.
