

How to check Diagtool logs

Steps

Step	Action	Screenshot
1	Login to AWS Click on FMCNA-Polarion-Development -> Management console	
2	Click on EC2, if it is not there then search EC2 in search bar.	
3	Click on Instances.	
4	Search the server's name in the search bar. Ex:(mirror, mirror2)	

5	After selecting the sever, click on connect	 The screenshot shows the AWS Management Console 'Instances' page. At the top, there's a 'Connect' button highlighted in yellow. Below the table of instances, the details for 'Instance: i-0459d889cd9b0624c (mirror2)' are shown. The 'Instance ID' is 'i-0459d889cd9b0624c (mirror2)', the 'Public IPv4 address' is '-', and the 'Private IPv4 addresses' are '10.40.113.220' and '10.40.113.108'.
6	Click on Session manager then connect	 The screenshot shows the 'Connect to instance' dialog in the AWS Management Console. The 'Session Manager' tab is selected. Below the tabs, there's a section titled 'Session Manager usage:' with a list of bullet points. At the bottom right, there's a 'Connect' button highlighted in yellow.

7

To check diagtool logs, use the below commands.

1. **sudo su**
2. **docker ps**
3. **docker exec -it <first 4 digit of container id> /bin/bash**
4. **cd polarion/**
5. **ls**

After ls command, **diagtool** folder should be visible.

6. **cd diagtool/**

7. **ls**

After ls command **run.sh** folder should be visible.

8. **./run.sh**

Before running **./run.sh**, make sure the server should be open in another tab to check the errors.

Note: After the Zip file created, we need to upload to Amazon S3.

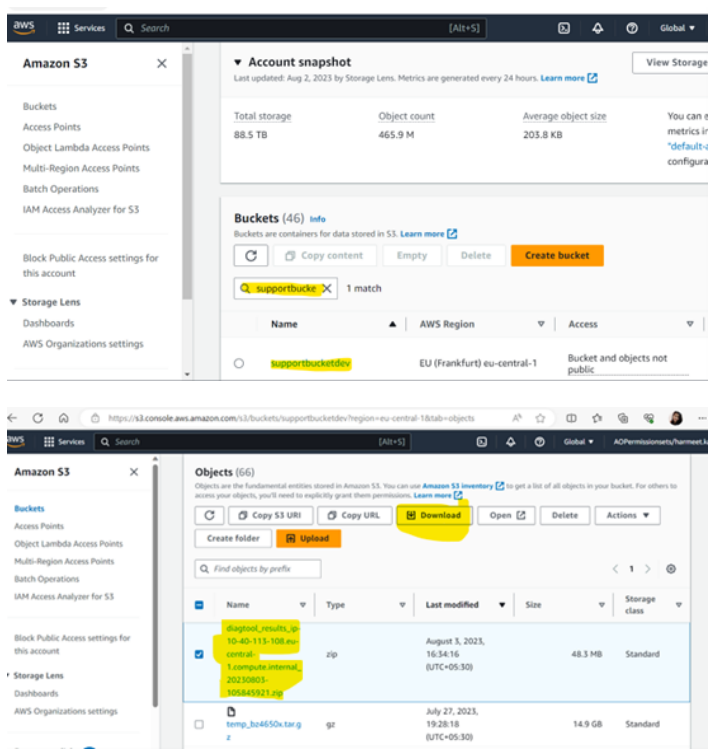

9. **cd results/**

10. **aws s3 cp diagtool_results_ip-10-40-113-108.eu-central-1.compute.internal_20230803-105845921.zip s3://supportbucketdev**

The first screenshot shows a terminal session where the user runs `docker ps` and `docker exec -it 7092487715-dkr.ec2.eu-central-1.amazonaws.com/polarion: /bin/bash`. The user then navigates to `/polarion` and runs `ls`, showing the `diagtool` folder.

The second screenshot shows the user navigating to `diagtool` and running `./run.sh`. The output shows the creation of a zip file `diagtool_results_ip-10-40-113-108.eu-central-1.compute.internal_20230803-105845921.zip`.

The third screenshot shows the user running `cd results/` and then `aws s3 cp diagtool_results_ip-10-40-113-108.eu-central-1.compute.internal_20230803-105845921.zip s3://supportbucketdev`. The output shows the successful upload of the zip file to the S3 bucket.

8	Go to S3 bucket and download the zip and share. Type supportbucketdev and click on it. select the uploaded file and click on download.	 The screenshot displays the AWS Management Console interface for Amazon S3. The top section shows the 'Account snapshot' with metrics: Total storage (88.5 TB), Object count (465.9 M), and Average object size (203.8 KB). Below this, the 'Buckets (46)' section lists buckets, with 'supportbucketdev' highlighted. The bottom section shows the 'Objects (66)' for the 'supportbucketdev' bucket. A table lists objects, with the file 'diagnost_results_10-40-113-108.msi-central-1-compute.internal-20250803-105845921.zip' selected. The 'Download' button for this file is highlighted. <table><tr><th>Name</th><th>Type</th><th>Last modified</th><th>Size</th><th>Storage class</th></tr><tr><td>diagnost_results_10-40-113-108.msi-central-1-compute.internal-20250803-105845921.zip</td><td>zip</td><td>August 3, 2023, 16:14:16 (UTC+05:30)</td><td>48.3 MB</td><td>Standard</td></tr><tr><td>temp_bca650xtargz</td><td>gz</td><td>July 27, 2023, 19:28:18 (UTC+05:30)</td><td>14.9 GB</td><td>Standard</td></tr></table>	Name	Type	Last modified	Size	Storage class	diagnost_results_10-40-113-108.msi-central-1-compute.internal-20250803-105845921.zip	zip	August 3, 2023, 16:14:16 (UTC+05:30)	48.3 MB	Standard	temp_bca650xtargz	gz	July 27, 2023, 19:28:18 (UTC+05:30)	14.9 GB	Standard
