

How to resolve LDAP synchronization job failure

steps

Step	Action	Screenshot
1	Login to Polarion production and go to Monitor. Link: - Home	
2	Go to the latest "Synchronize users for LDAPs" job entry.	
3	Check if the status is in 'OK' or 'FAILED'. If it is in OK state, no further action needed.	
4	If status is 'FAILED', then investigate the 'log'.	
5	Check for the error in the log in the format [contains illegal characters in the id attribute: cn = 'xyz']	
6	If logs contain the error mentioned in Step- 5 then raise General Support ticket using the below link and assign it to yourself and keep Michael Bounach as Request Participant . Link: - General Support	

7	Login to IT-Schweinfurt portal using this link: IT-SW Portal	
8	For further investigation, mention the below details in the Comment section of the SWIT Ticket in which you have raised the IT-SW request for the affected User Entry. Hi Team, We observed in the Production "Synchronize users from LDAPs has failed" due to this user (Name: UserName FID: fid of the user) entry. Could you please remove these invalid user entries from GG-DE-SCW-Polarion-ALM-Users group which is causing our monitoring job failure. Attach the Error message: Ex: [User with DN 'CN=Dacey Ryan,OU=UserAccounts, OU=MNG,OU=CN,DC=fme,DC=ads,DC=fresenius, DC=com' contains illegal characters in the id attribute: cn=Dacey Ryan] cn= <name value> Instead on FID, the username is added and so the job failed. Could you please replace this entry and add the user with FID. Please have a look into this. It is a high priority for us.	

9	Add the IT-Schweinfurt number to the ticket raised in Quick service as internal note using below format. Internal: Informed the IT-SW Team regarding the issue SWIT-> ####	
---	---	--

Note: In case the issue is not resolved by IT-Schweinfurt team please reach out to Michael Baunach.
