

Procedure For Windchill to Polarion Integration

Note:

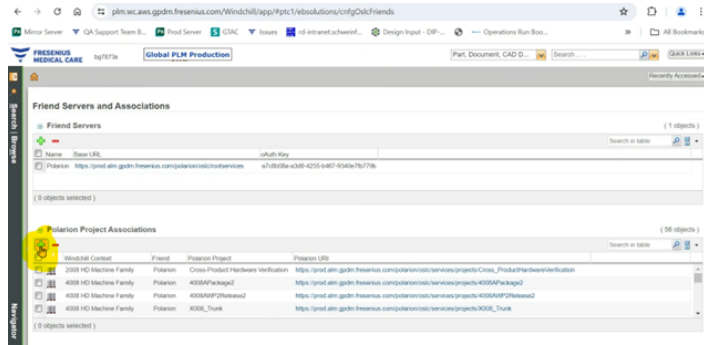

1. When we received the Polarion Windchill connection request, please verify Polarion and windchill connection form if all signatures were done properly or not.
2. If user selects below first three types of integrations, then follow this procedure.

TASK ANALYSIS POLARION

Step	Action	Screenshot
1	• Login to Windchill • Path: "Browse->Site->Polarion Integration" • Click on Polarion Integration as per screenshot.	
2	Click on "Friend Servers Associations"	

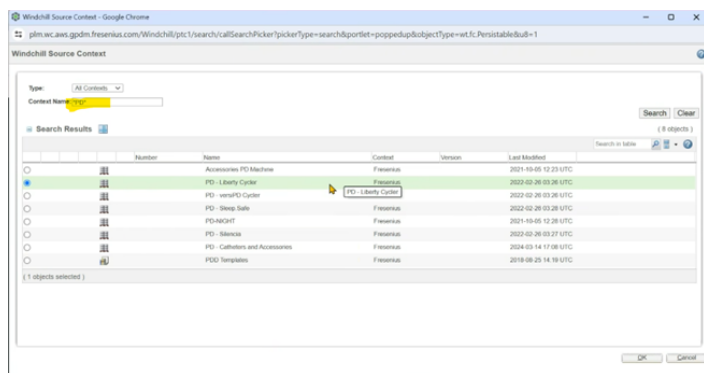

3

Click on “+”, as per screenshot

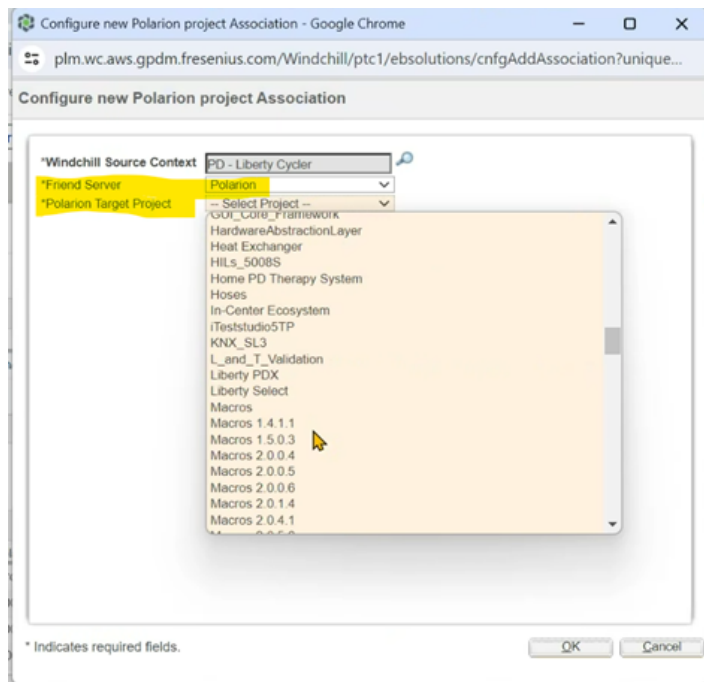

4

- Search for Windchill container on which connection need to be established.
- Then Select the container.
- And Click “OK”

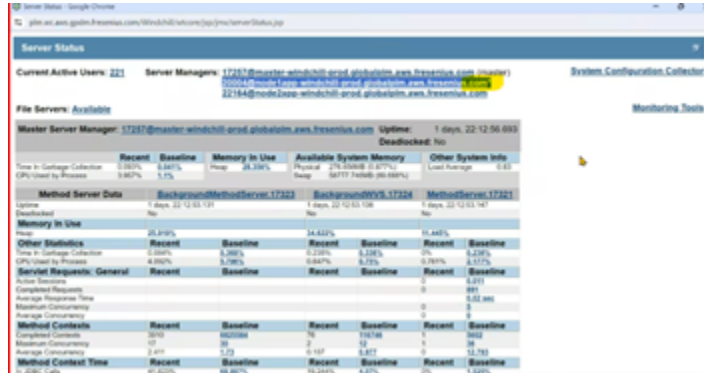

5

- Now Polarion need to be selected as Friend Server as per screenshot.
- And Then Select Polarion Project on which connection need to be established as per screenshot.
- Click on “OK”
- With this step we will be done with connection in one of the cluster nodes, i. e. either Node1 or Node2 or Master

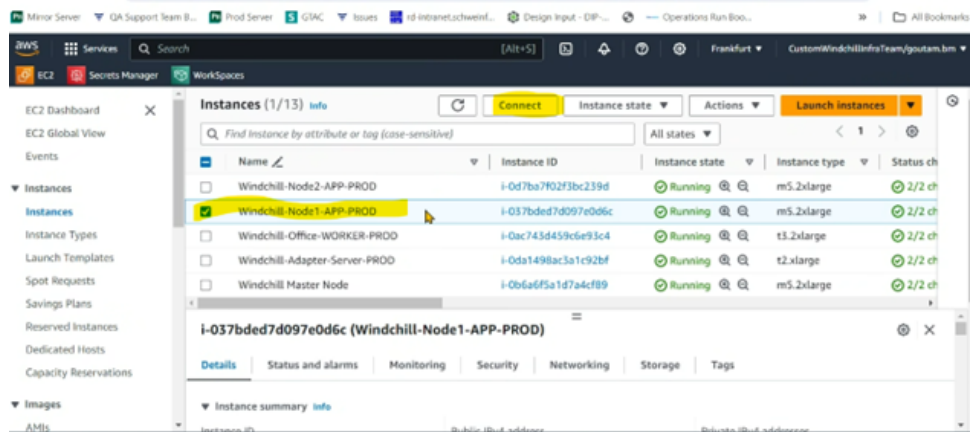

6

- This step is to check on which node the connection was, so that we can do it manually on other two nodes.
- Path: “Site->Utilities->Server Status”
- Search for the Asterisk “*” in server managers, and that indicates the node where the connection was done.
For Example: In this screenshot it is “NOD E1”.

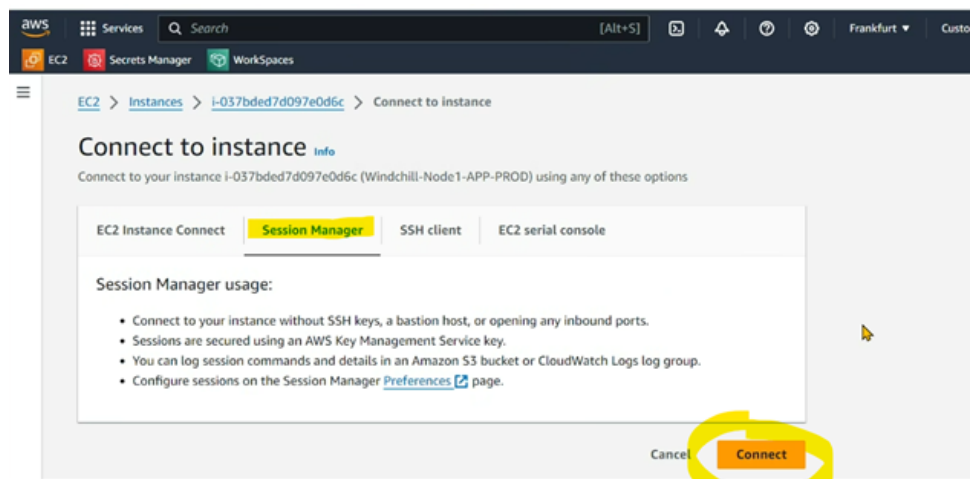

7

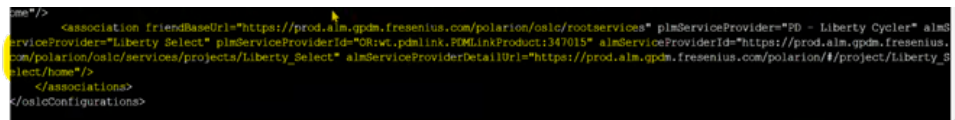

- Login to AWS.
- Go to “Windchill->EC2->Instances”.
- Then Check the node where the connection was already established, here in this example its node1.
- Then Click “connect”.

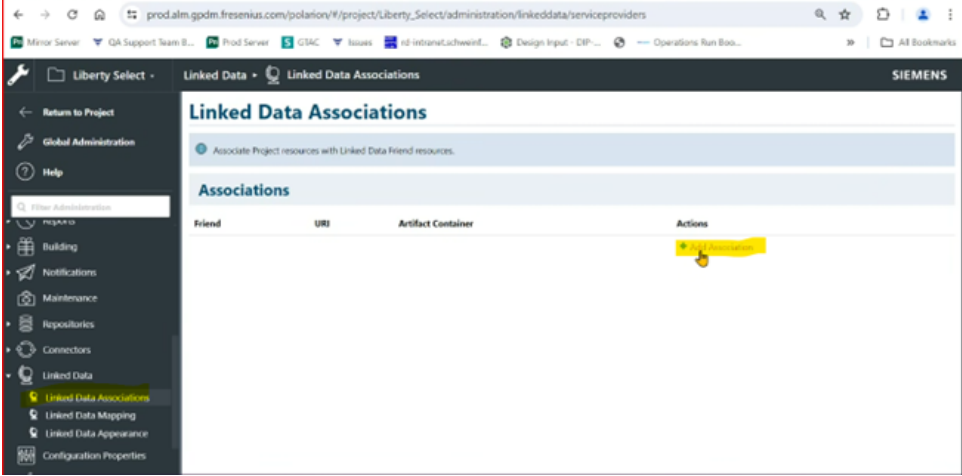

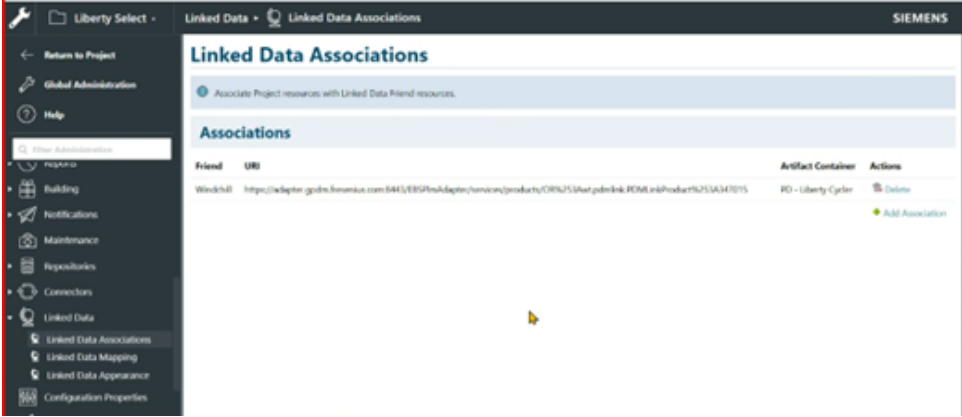

8

- Then Click on “Session Manager”
- Click on “connect” as per screenshot.
- You will be redirected to console.

9	Run below commands in console. • sudo bash • cd \$WT_HOME • ls codebase/ext/lebsolutions/plm • vi codebase/ext/lebsolutions/plm/loslc_config.xml	
10	• After running above commands, we will get an output. • Then search for the Polaron Project which we are working on, in the example its Liberty PDX as per below screenshot. • Then copy the whole element i.e. <association /home"> with respect to the working project and keep it in a note pad.	
11	• Repeat the steps from 7 to 9 for node-2 as well. • Then just paste the line which we have copied in step-10 in the end of the file as per screenshot. • Follow below commands just to make sure it is copied well or not. Stand on the end of the line which was pasted and Click ESCAPE. Then give “:wq” (quit) Then give command “less codebase/ext/lebsolutions/plm/loslc_config.xml” And you should be able to see the pasted line properly.	
12	• Follow from step-7 to step-12 for remaining node, in this example it is MASTER NODE.	

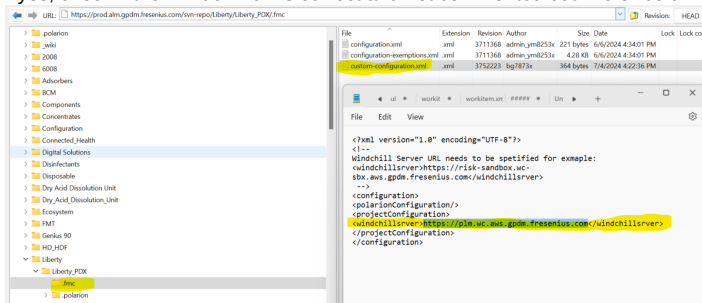

13	- Now login to Polaron. - Navigate to the target project. - Then Go to Administration. - Then Go to linked data. - Then Click linked data association. - Click "Add Association" as per screenshot.	
14	- Search for the windchill container. - Select it and establish the connection as per screenshot.	

Note:

SOFTWARE SYNC ENABLING POLARION

When User request Software sync, check if the "**custom-configuration.xml**" file is available under **.fmc** of that Project via SVN.

If yes, check if the Windchill url is correct and not commented out. Refer below screenshots.

If the "**custom-configuration.xml**" file is not present under the **.fmc** folder, add it by following below steps:

1. Open "Configuration Management & Administration" Project and open "Project Configuration Status Overview" page.
2. Select the Template Project and the Target Project.
3. Search "**custom-configuration.xml**" and click on Copy button to add the file to the Target Project.
4. Once the file is added, sync is established successfully.

FMC Configuration Folder

Search:

File / Path	Revision	Updated On/ Updated By	Category	multi "Version: 2.0"
configuration-exemptions.xml ./fmc/configuration-exemptions.xml	1198738	Sun Oct 25 15:53:38 UTC 2020 root	Changes allowed with merge	Valid Action:
