

User Creation in Polarion

1.1.1 User Creation in Polarion

Who	Does What	When	How	Role / Access
Cognizant AMS Team	Process the User creation request in Polarion Production	When User requests access to Projects in Polarion Production	Cognizant AMS Team to follow the below steps to handle Polarion access issues	Role in Polarion Administration Tools Project in Production

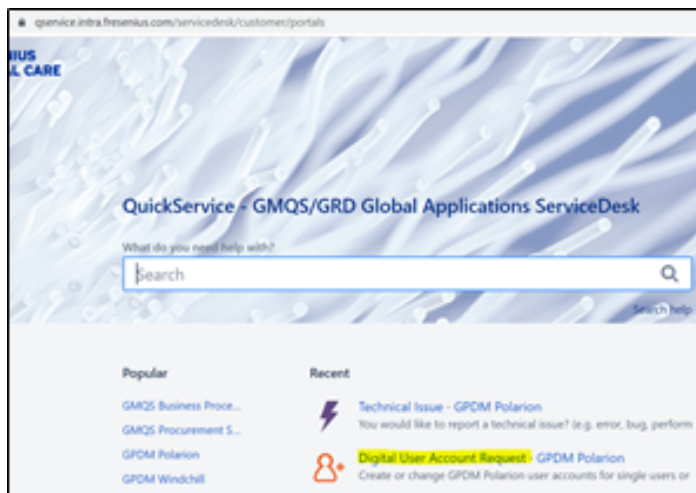

Actions:

Cognizant AMS Team gets requests as per below different scenarios for User creation in Polarion Production.

Scenario 1: New User Creation

- New Polarion user, who has never had access before, requests access in Polarion Production server.

The user raises a request in QuickService portal under "Digital User Account Request" by clicking on the link(see screenshot).

- The user fills the [Digital UACF](#) (there are different forms for Single User creation and Multiple User creation). User also needs to attach the relevant Training certificate as per the requested Roles.

 QuickService Help Center / GPDM Polarion

Digital User Account Request

Instructions:

Single User Account Request:

- 1) Read the step by step user guide: [How to create a user account request](#).
- 2) Fill out the electronic form below.
- 3) Upload the user's training certificate(s) in the attachment field below (if applicable).

Multiple Users Account Request:

- 1) Read the step by step user guide: [How to create a user account request](#).
- 2) Fill out the electronic form below.
- 3) Download the [Multiple User Account Table](#) and specify the request per user.
- 4) Upload the users' training certificate(s) (if applicable) and the Multiple User Account Table in the attachment field below.

- On getting the request in QuickService portal, AMS Engineer cross verifies the user's presence in Polarion by checking in [Home](#)
- If user is new and doesn't have account in Polarion, AMS Engineer raises a request to create the user account in Polarion repository.
- To create the account in Polarion Repository, AMS Engineer raises a request to IT_Schweinfurt team using below URL:

[IT-SW Portal](#)

Example of Request: Once after the link is open, you will find all the below options and answers are highlighted.

1. Um welche Windows Gruppen geht es? / Which Windows groups are we talking about?

GG-DE-SCW-Polarion-ALM-Users

2. Berechtigungen / Permissions

Alle hinzufügen or Add All

3. Für wen sollen Berechtigungen angepasst werden? / For whom should permissions be adjusted?

Anfrage für einen anderen Benutzer or Request for another user

4. Kostenstelle / cost center

DE01001032

5. Beschreibung / Description

As agreed with IT Operations Schweinfurt, please add the following user to group

GG-DE-SCW-Polarion-ALM-Users:

FID:

- Once the user is created in Polarion, AMS Engineer enable the user in production and provide the requested role/s (refer [Section 3.3](#) Steps to Assign Project Roles using Custom Web-UI).
- Once the Roles are provided, the AMS Engineer route the Request Form in QDOK along with the training certificate for Archival.

Process to be followed by AMS Engineer for NA User If User account is not present in polarion

If user has account in NA AD, AMS Engineer will raise a request to get user added to **Polarion-Users** group.

To create the account in polarion Group. AMS Engineer will follow the below step:

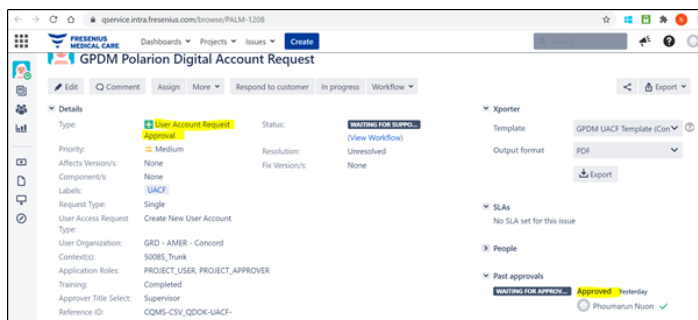

1. AMS Engineer will raise a request to AD team using below URL: - [Incident-ServiceNow](#) fill below details
 - a. Add description to ticket "Add User <Username >to **Polarion-Users AD group**
 - b. Assign a group for services now ticket as **(DTI-INF-AD-L3)**
2. Once the user is added to Polarion group, AO Support engineer will enable the user in Polarion Production and provide the requested role/s.

Scenario 2: Request For Admin Roles:

If the User requests Global Admin role in Polarion, steps performed by AMS Engineer are:

- Verify that the [Digital UACF](#) is correctly filled by Requestor and Approved by the Approver on QuickService.

Example:

- Verify that the AMS Engineer has undergone internal training (provided by the team) to ensure he is well acquainted with the process.
- If Yes, then route it to QDOK for approval from FMC Polarion Process Owner.
- Once the request is approved in QDOK, AO support engineer will create admin_FID account for the requestor and then provide the admin roles accordingly.

Scenario 3: Request to create Technical Users:

If the request is to create Technical Users, steps performed by AMS Engineer are:

- Verify that the User Request Form is correctly filled.
- Confirm with the requestor if the Technical User has to be created in the Windows AD (it is usually in Windows AD)
- Route it to QDOK for approval from FMC Polaron Process Owner.
- Once the request is approved in QDOK, reach out to Michael Baunach to create the Technical User account for the requestor in Windows AD. Once the user is created, provide the roles.

Scenario 4: Adding Roles in Projects:

An already existing Polaron user, requests access in other Projects in Polaron Production server.

- The user raises a request in QuickService portal under “Digital User Account Request” by clicking on the link(see screenshot).

- The user fills the [Digital UACF](#) (there are different forms for Single User creation and Multiple User creation). User also needs to attach the relevant Training certificate as per the requested Roles.

The screenshot shows the "Digital User Account Request" page in the QuickService Help Center. It has a header with a person icon and the text "QuickService Help Center / GPDM Polaron". Below the header, there are two sections: "Single User Account Request" and "Multiple Users Account Request". Each section has a list of instructions. For the Single User request, the instructions are: 1) Read the step by step user guide: How to create a user account request. 2) Fill out the electronic form below. 3) Upload the user's training certificate(s) in the attachment field below (if applicable). For the Multiple Users request, the instructions are: 1) Read the step by step user guide: How to create a user account request. 2) Fill out the electronic form below. 3) Download the Multiple User Account Table and specify the request per user. 4) Upload the users' training certificate(s) (if applicable) and the Multiple User Account Table in the attachment field below.

The Training Certificate(s) needed as per the following roles are-

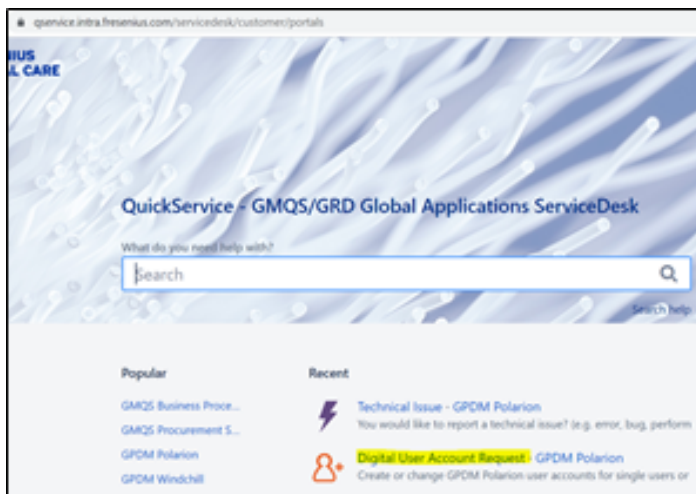

Role	Certificate(s)
Project_user	Read-only User Certificate

Project_approver, Project_assignable, Project_epm, Project_risk management, Project_testmanager, Project_changeapprover, Project_requirements_only	General User Certificate OR Polarion Change Management Certificate OR Certificates of Completion of – GPDM Polarion Basics, GPDM Polarion Requirements Management, GPDM Polarion Verification and Validation, GPDM Polarion Pre-Production Defect Management, GPDM Polarion Design Requirement Traceability User Guide
Project_admin	Project Admin certificate

- AMS Engineer provides the request Roles in the Projects and informs the user

Scenario 5: Removing Roles in Projects:

- An already existing Polarion user, requests removal of Roles from Polarion Projects. The user raises a request in QuickService portal under "Digital User Account Request" by clicking on the link-- (see screenshot).

- The user fills the Digital UACF (there are different forms for Single User and Multiple User).

QuickService Help Center / GPDM Polarion

Digital User Account Request

Instructions:

Single User Account Request:

- 1) Read the step by step user guide: [How to create a user account request.](#)
- 2) Fill out the electronic form below.
- 3) Upload the user's training certificate(s) in the attachment field below (if applicable).

Multiple Users Account Request:

- 1) Read the step by step user guide: [How to create a user account request.](#)
- 2) Fill out the electronic form below.
- 3) Download the [Multiple User Account Table](#) and specify the request per user.
- 4) Upload the users' training certificate(s) (if applicable) and the Multiple User Account Table in the attachment field below.

- Name of User

Kaur Harmmeet

User FID *(optional)*

Department

None

User Account Request Type

☐ None

☐ Create New User Account

☐ Change User Permissions

☐ Change Of FID

☒ Remove User Access To Project

☐ Remove User Access To System

Affected GPDM Polarion Project(s)

- [illegible]

- Step 1: Login to Polarion Portal
- Step 2: Select Project - Polarion Administration Tools
- Step 3: Select Document & Pages -> "User Management" space
- Step 4: Select Project Role Assignment page
- Step 5: Select project PROJECT_NAME (Which is mentioned in request form by the User)

[illegible]

- ### Project Role Assignment

Select User for Role Assignment in Project "QA1.4.1.1"

Select Project Select User Assign Project Roles to User

Polarion Users				Action
ID	Name	Initials	Description	E-Mail
Search ID	admin_test_user	Search Initials	Search Description	Search E-Mail
alt:	admin_test_user	a

(Showing 1 to 1 of 1 entries (Filtered from 1,037 total entries))

Widget version: 1.0.1

- Step 7: Navigate to roles which shall be removed based on request (E.g.: "project user" in screenshot)

- Step 8: Confirm with OK

Project Role Assignment

This Page has no content yet

Assign User Harmeet Kaur (hk4430x) to Role(s) in Project "4008A Package 2"

Select Project

Select User

Polarion Project Roles	Action
ID	
Search ID	
project_user	Remove User
project_approver	Add User
project_assignable	Add User
project_admin	Add User
project_risk_management	Add User
project_requirements_only	Add User
project_epm	Add User
project_testmanager	Add User
project_user_group_1	Add User
project_user_group_2	Add User
project_changeapprover	Add User

- Step 9: Now the user is removed from project related roles.
- Step 10: Update QService ticket and close the request.

Scenario 6: Change in Application roles in the ticket

- If the User raises a UACF request for 'X' role in 'Y' project with an approver added in the ticket.

Ex: PROJECT_USER role in 5008 Trunk project.

Note: An email notification should be sent to the approver to approve the request.

- After sometimes, if the user requests in the same ticket, for additional roles in the particular project.

Ex: PROJECT_USER, PROJECT_ASSIGNABLE, PROJECT_APPROVER, PROJECT_TESTMANAGER etc.. in the 5008 Trunk project.

Note: No new additional email will be triggered to the approver.

- To resolve this issue, remove the approver and again add the same person as the approver in the ticket to trigger additional email with the correct details of the Application roles.

So that, approver can approve the correct details of Application roles.

Scenario 7: Request For Global Read Only Role:

If the User requests Global Read Only role in Polarion, steps performed by AMS Engineer are:

- Verify that the [Digital UACF](#) is correctly filled by Requestor and Approved by the Approver on QuickService. The Approver of a Global Read only role can only be a System Owner of the GPDM Polarion System.
- Once the request is approved in QuickService, AMS Engineer will provide Global_Read_Only role for the user in production.

Note: To ensure that Users with Global_Read_Only role can view content of GPDM Polarion projects a job (SetUserRoles.job) is running everyday at 2 am CET to assign the Core_user role of the GPDM Polarion projects also to the Global_ready_only accounts. Same holds true for removal of the Global_read_only role.

Scenario 8: Pre-Requisites to be checked before giving access on any Polarion project

- When a Polarion users requests access to any Polarion projects, AMS Engineer will check "description" and "context" thoroughly:
- If user mentioned in the **context**, that they need access in GPDM POLARION project and in **description** they mention any-another project name, before proceeding further on this kind of request AMS Engineer needs to coordinate with user and to get confirm user want to access on GPDM POLARION or not.
- Then AMS Engineer will provide access to user accordingly once after receiving confirmation from user.

Note: Don't provide access on both projects which are mentioned in "description" and as well as "context", since sometimes users will mention a random project name/GPDM Polarion in context as the target project won't be available in context and target project will be mentioned in description or comment (sometimes) .

Scenario 9: Onboarding process for non-PLT users

Pre-Requisites to be checked by AMS Engineer for non-PLT:

- User should be present in FME AD with entry in the 'cn' field= <user FID> or <username>.

Process to be followed by AMS Engineer for non-PLT:

If user has account in FME AD, AMS Engineer will raise a request to get the user added to Polarion Group < GG-DE-SCW-Polarion-ALM-Users>.

To create the account in Polarion Group, AMS Engineer will follow the below step:

1. AO Support engineer will raise a request to IT Schweinfurt team using below URL: <https://jira-ext.fmc-ag.com/plugins/servlet/desk/portal/32>
2. Once the user is added to Polarion group, AMS Engineer will enable the user in Polarion Production and provide the requested role/s.

Scenario 10: Change of FID/UserID

If a user's FID is changed and he raises a request to transfer the roles/access from old FID to new UserID, the AMS Engineer has to validate the below:

- The user has raised a request in [quick service](#)
- The user has filled the Digital UACF and selected Change FID option.
- The user has mentioned the old FID and the new FID (in which the roles/access has to be transferred).

On receiving the request, the AMS Engineer follows the below process for change the FID.

- Step-1: Login to Polarion with your admin credentials.
- Step-2: Click on the gear icon on the top left and select administration in the drop down.
- Step-3: Select user management and select user.
- Step-4: Search for users old FID that is mentioned in the ticket in the search box.
- step-5: New User ID need to be mapped with old FID [how to map two accounts please check [Scenario-4 in](#) KB article
- Step-6: Click on Save to save the changes
