

Mirror Sync with Production

To sync Mirror with Prod data, mirror has to be deployed via the pipeline. To do so, follow below steps:

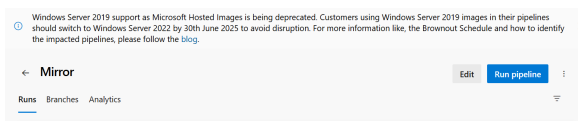

1 Login to Azure

Pipelines - Runs for Mirror

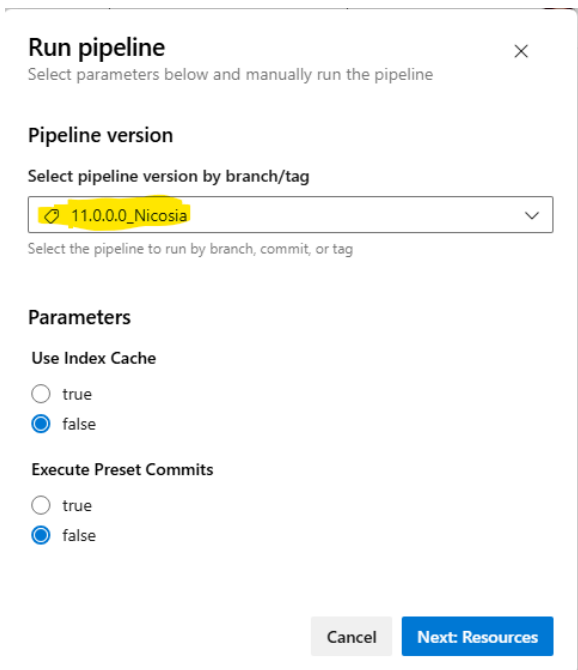

2. Select Pipelines and select Mirror

3. Click on "Run Pipeline"

4. Select TAGs and search the latest release name with which Production is deployed.

5. Select "false" for "Use Index Cache"

6. Select "false" for 'Execute Preset Commits'

7. Click Run

8. Approve the deployment request and mirror will be redeployed.
